Public Participation in the Implementation of European Water Management Issues

R.DARTOUT – D.MARCOVITCH
Seine Normandy Water Agency

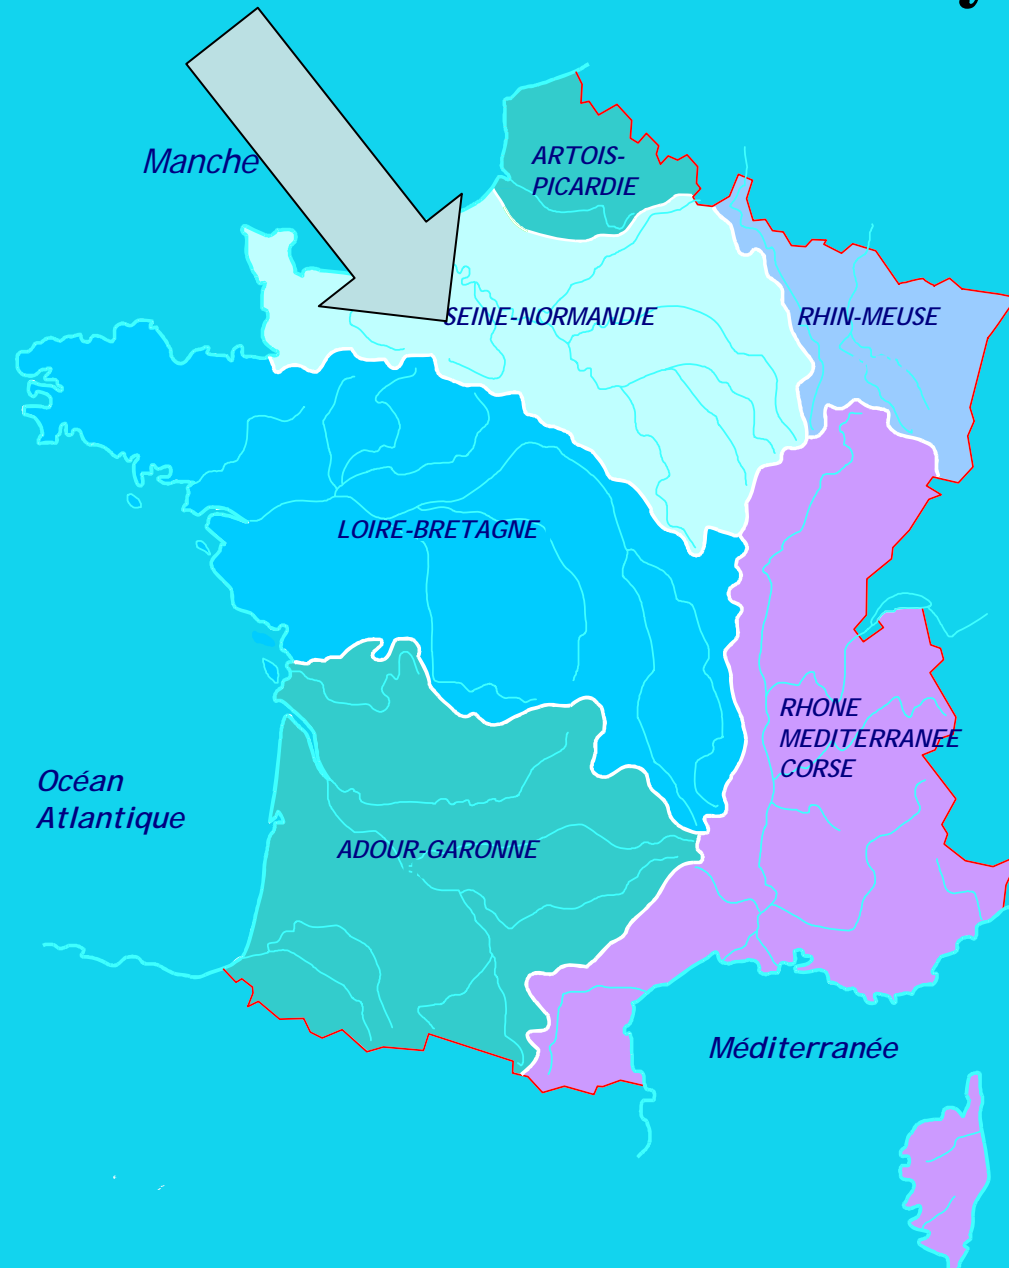

Mexico City
March 18, 2006

Where is France ? : in European Union

where is the Seine Normandy basin ?

Seine River in PARIS

European Water Framework Directive (WFD)

- **EU States (25) shall encourage** the active participation of all parties concerned in the implementation of this directive,
- **States shall ensure** that river basin district management plans (production, revision, updating) *are published and submitted for the observations of the public.*

European Water Framework Directive (WFD)

- **each of the 450 millions European citizens** has the possibility to give his opinion about main water problems and priority actions to solve the problems,
- **France 2005** : Water Agencies organize **the first public consultation** about his project of ***River Basin District Management Plan***.

France 2005 public consultation procedures

- **Government (Prefet)** is the Legal Authority,
- **Water Agency** is Manager and Operator,
- Targets, Schedule, and Frame of Consultation Document are precisely determined.

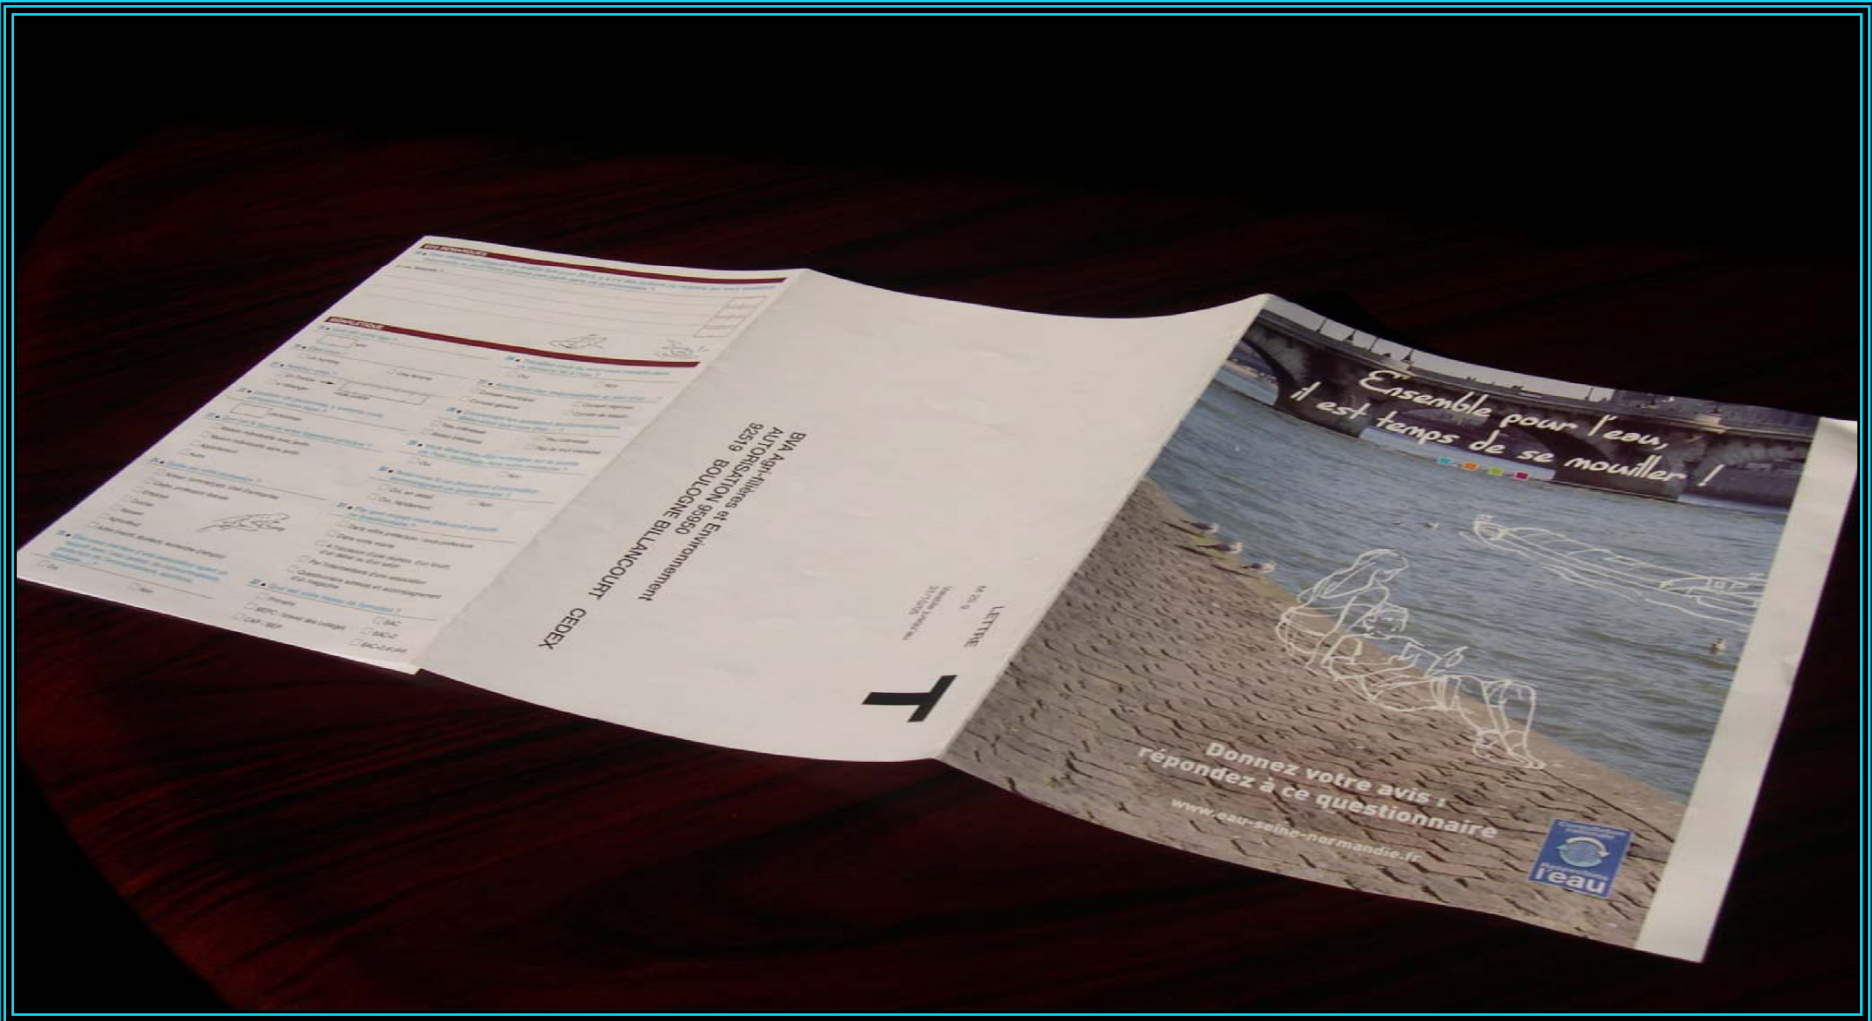

How do we involve wide public ?

- Document **easily understandable**,
- Information of local and national **public medias** (TV, Newspapers...),
- **Partnership at the local level** (communes) where water problems are usually more concrete,
- **Encourage participation of small NGOs** and unorganized stakeholders (subsidiaries).

How do we consult them ?

With a specific **survey**:

First results of 2005 consultation :

- **Priority to stop water pollution by toxics substances** (pesticides and heavy metals),
- **Prepare management of crisis periods** (drought and flood), with local public,
- **Develop Information and education,**
- **More transparency about price of water,**
- Enforce “*polluter, pay*” principle,
- ***Solidarity with south people.***

Potential benefits of public participation

- **Increasing public awareness** on environmental issues,
- **more transparent and creative** decision making,
- **constructive dialogue** with various publics,
- **Increasing public acceptance** on water management cost.

Lessons Learned : many questions are not resolved...

- **What is the best way to inform the public ?**
 - media national or local (TV, newspapers...),
 - internet,
 - direct mailing,
 - public debate,
- **Is the wide public really concerned by all subjects of water management?.**

Conclusions

The two main challenges are:

- how **integrate** public opinion in a ***River District Management Plan*** ?
- How **restitute** for the wide public results of the consultation ?.

Thank you for you attention.

Richard DARTOUT

Daniel MARCOVITCH
