The Water & Nature Declaration

No Water Security Without Ecological Security / No Ecological Security Without Water Security

A virtuous cycle exists between the integrity of our shared water resources and the health of the planet's natural systems. Without each other, the two cannot exist. Public policies dedicated to improving water security and those focused on ecological security, therefore, must be better coordinated and more thoughtfully integrated by all vested parties.

The Water and Nature Declaration is an initiative of the World Water Council that aims to strengthen the links between water practitioners and the nature community and foster a new level of collaboration.

Only by breaking down barriers and working together can we deliver water security and ecological security for all. Please join us.
