

River basin management & cost recovery : The French industry's point of view

Christian LECUSSAN
Président

Euro RIOB - 10 décembre 2021

FENARIVE : we represent almost all the economic sectors

TOTAL

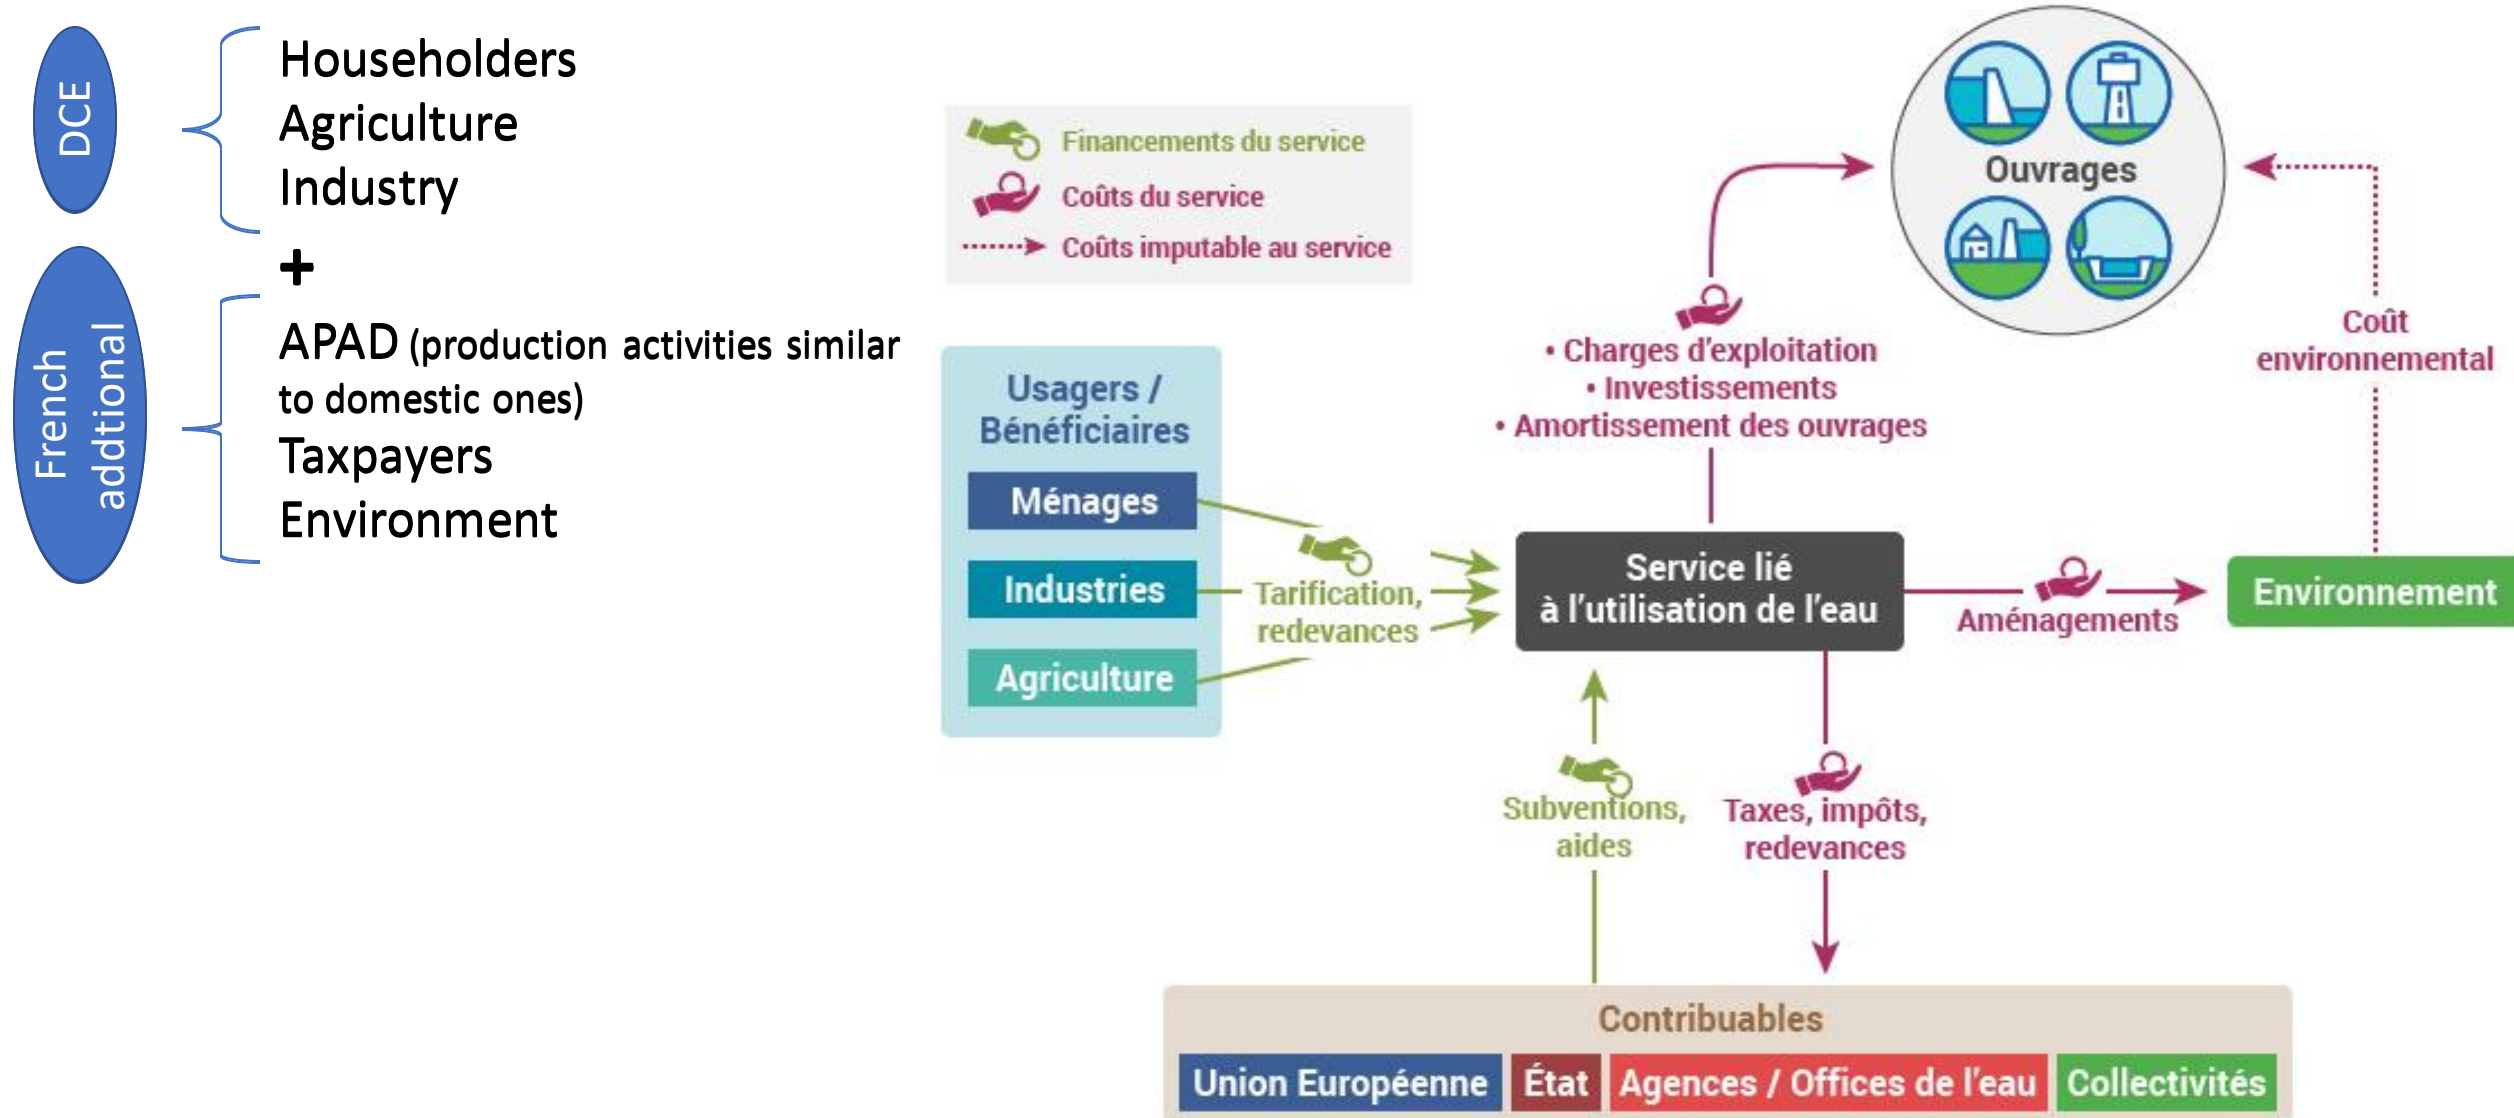

F.E.T.
Fédération de l'Ennoblement
Textile

Association des Utilisateurs d'Eau du Bassin de la Somme **AUEBS ENVIRONNEMENT**

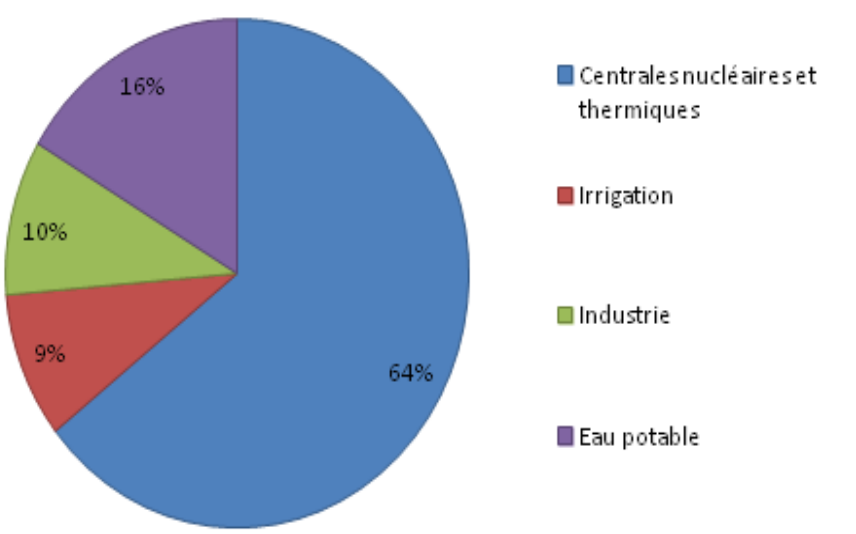

The French categories of users & the transfers between users

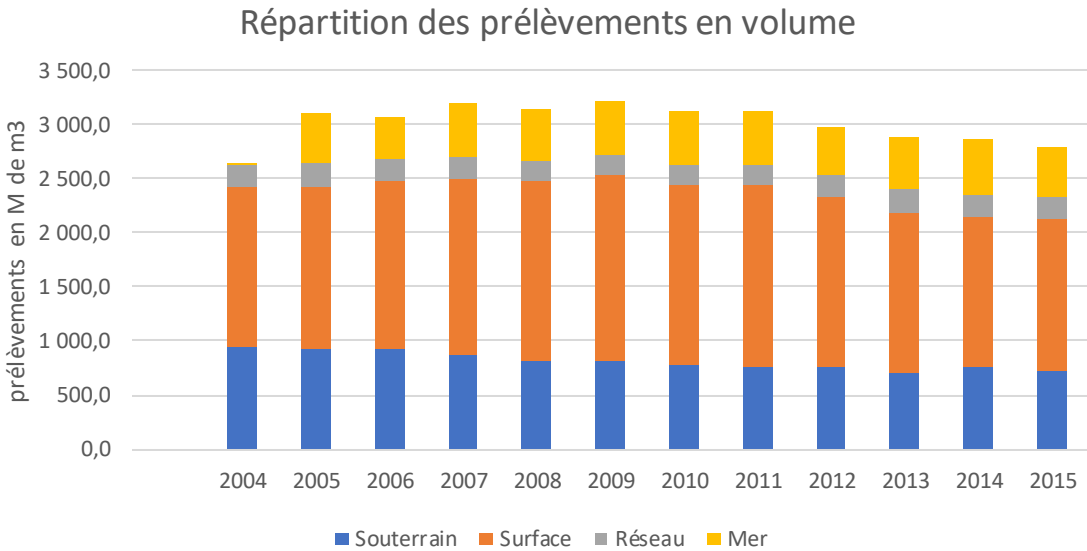

French industry and water : some figures

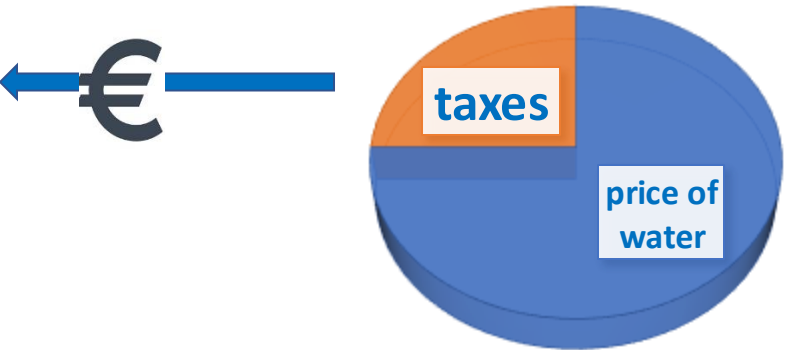

30 billion per year (all uses)
10% for industry

only 7% provided by water induction network
93% of the water provided to industry paid by industry (investment + maintenance)

- ✓ to local authorities
- ✓ to State agencies : water agencies VNF

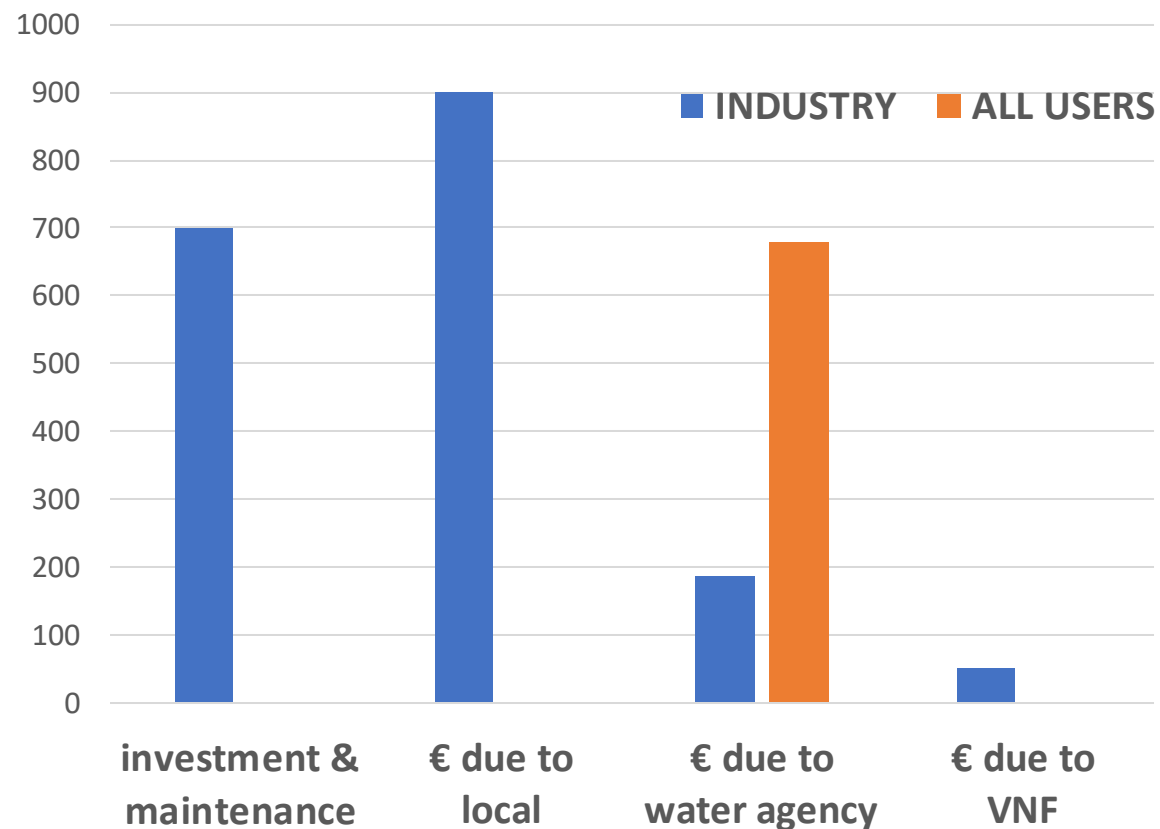

Focus on industry in Seine Normandy basin

What industry pays (M€ - 2020)

1,8 M€

What industry receives (M€ - 2020)

Works
with an application for grant

141 M€

€

20%

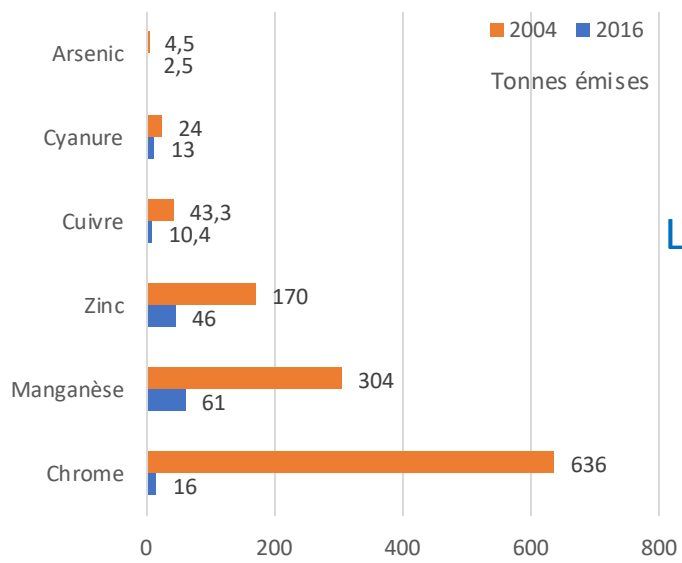

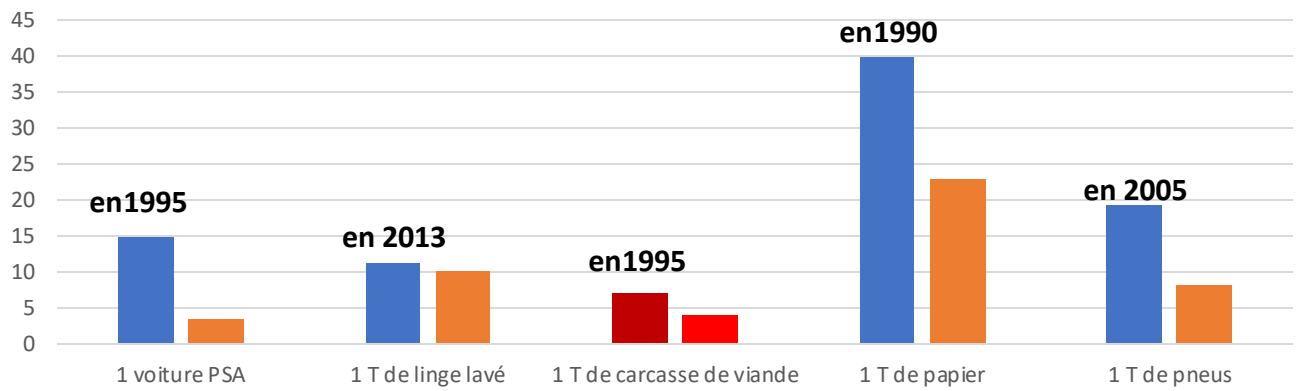

State grants

29 M€

More projects? More works? More State grants? Yes but...

Because the job has been done

Less water to produce

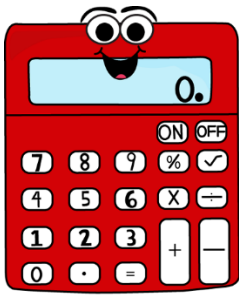

Less pollution

Because it's too complicated to ask for State grants... or too long

Because the rules are too restrictive

Because of the European framework for State grants

The European framework for State grants : need to change the rules

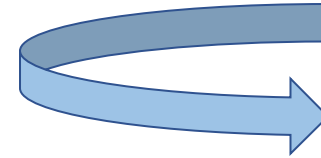

IED - Industrial emissions Directive

BREF - Best availables reference documents

BAT - Best available techniques

4 years to be compliant

NO GRANT

And on the French side

What if the French water Agencies were in charge of the works ?

What if the French water Agencies considered the financial profitability of the projects,

Thank you for your kind attention
